

So, She Found Her Tongue

Description

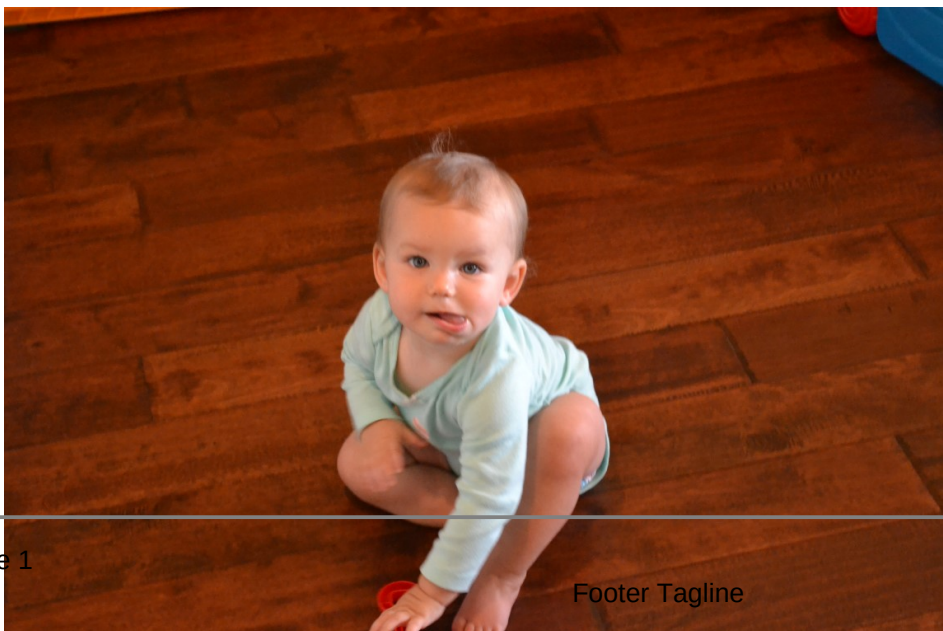

It never gets old witnessing your offspring learning and doing more each day. I love seeing Avery discover new things about herself and the world. Although, the teeth grinding has *worn out* itâ€™s welcome and can stop now!

Averyâ€™s most recent self-discovery is her tongue, and itâ€™s obvious she has become quite fascinated with its many uses. Of course, helping to swallow food is not one of the uses she has figured out, but feeling her 5 teeth is right at the top!

Over the past few days, Going Mom and I have collected several pictures of Avery with her tongue in action. Instead of boring you with my words, I figured Iâ€™d just share some of the best tongue pics (clean minds, people!) with you here.

Hey World, I have a tongue!

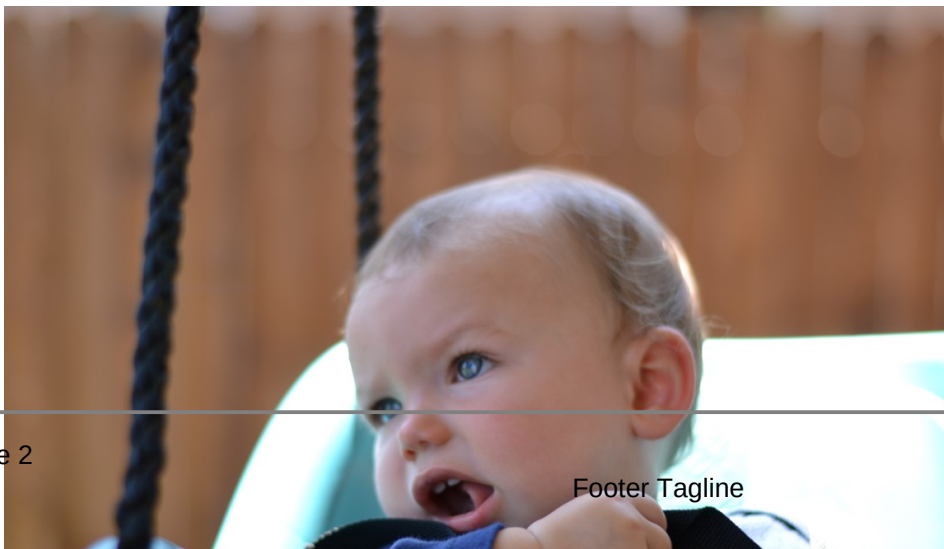

So this is what it feels like between my lips and teeth. Interesting.

Iâ€™m crazy and Iâ€™m happy, but if I bite down right now, I think that would hurt.

Howâ€™s my panting dog impression?

Swinging with my tongue, what a glorious day!

Got my thinking tongue outâ€¦!

Hey, whereâ€™d my tongue go?

Oh, there it is! Phew!!

Do you remember your little one's tiny self-discoveries?

How long until they became familiar with how to properly use them? *Sometimes, I feel like even us adults aren't all that sure how to fully use what we have!!*
