

Nexus Aloe Rid Shampoo – Passing Hair Follicle Drug Tests

Description

Today, we are constantly faced with all kinds of drug tests, tests which could affect the trajectory of our careers. More and more employers are beginning to demand a drug free environment. The reason for this is simple; companies in the U.S alone lose about \$100 billion annually to drug and alcohol abuse. Read more about it here: <https://www.verywellmind.com/substance-abuse-in-the-workplace-63807>

These are not costs that employers are willing to continue to bear. It therefore makes sense for them to constantly be on the lookout for such cases so they can nip them in the bud and avoid the huge cost to them and their operations. So if you test positive for any of the substances that have been classified as controlled, you may find yourself facing some sanctions or even an outright sack.

There are different types of tests that employers can adopt. These include saliva test, blood test, urine test and hair follicle test. Of all the types of drug tests we have listed above, the hair follicle test can be quite troublesome and we will see why briefly.

What is a Hair Follicle Drug Test?

A hair follicle drug test is a method of testing for drug usage that uses strands of hair to determine drug usage. This type of test can be used to determine usage of drugs such as: amphetamine, methamphetamine, marijuana, ecstasy, PCP, cocaine, and opioids.

When a person uses any drugs, it goes into the blood stream. Each hair follicle has a blood vessel feeding it. The blood vessels carry the blood with the drug into the hair follicle where they can then be detected for a period of time.

We mentioned that hair follicles tests can be quite troublesome because whereas other types of drug tests can discover drug usage from between 1 to 30 days to the date of the test (depending on the drug used and the test method), this type of test can discover drug usage from up to 90 days prior to the date of the test. Of course this will vary depending on the drug used and other factors like frequency and quantity used.

Any employer that really wants to find out if an employee or prospective employee has used any controlled substance in the past three months will simply opt for a hair follicle test.

To carry out a hair follicle drug test, strands of hair of about the thickness of a pencil and measuring at least 1.5 inches in length will be required. The hair for the test cannot be taken from a comb as in the case of DNA tests. It has to be taken from the head of the test subject before the test.

Aside from the fact that this type of test can show drug usage from up to 90 days before the day of the test, it is also very non-invasive and reliable. Cheating in this type of test is not easy and the test can be re-conducted with the same hair samples over and over again.

Beating a Hair Follicle Drug Test

If you have read up to this point and you have a hair follicle test in the horizon and you are not absolutely sure you will come out of the test unscathed you may be a bit worried. Yes, we noted that beating this type of test can be difficult. We however did not say it was impossible so you can breathe again.

There is a simple but effective way of beating a hair follicle test. There are detox shampoos that you can use and your hair follicles will be cleansed of any telltale signs of drug usage. One example of such a hair shampoo is the Nexxus Aloe Rid Shampoo.

There is a possibility that some prescription drugs you are taking can contain some substances that are controlled. It is also possible that you live in a state where marijuana is legal but your employer does not like the idea of having people who take it as employees. Whatever your reason for wanting to beat that drug test, this shampoo can get the job done for you.

How Does Nexxus Aloe Rid Shampoo Work?

The Nexxus Aloe Rid Shampoo is a shampoo that uses propylene glycol as its active ingredient. It also includes other ingredients among which are: Water, sodium sulfate, cocamide DEA, cocamidopropyl betadine, aloe barbadensis gel, panthenol, tocopheryl acetate, tetrahexyldecyl, avocado oil, soybean, sodium thiosulfate, and methoxydibenzoylmethane. These ingredients help remove the toxins from the substance you have ingested from your hair follicles.

To effectively use this shampoo it is recommended that you follow a simple guide. To achieve the most optimal result, start using the shampoo some days before the scheduled test. If you can, start using it 3 to 5 days before the day of the test. If you can start earlier, that's even better. You can learn more about how to use this product [here](#).

To be on the safer side, after using this product for a while, conduct a test by yourself before heading out for your official test. While this product has been severally proven to work, it is best for you to conduct a confirmatory test of your own before heading out for your test. You can get a self-test kit at most reputable pharmacy stores around.

Conclusion

There is no doubt that the best way to pass a drug test is to stay totally away from drugs and other controlled substances. That said, should you find yourself in a situation where you need to beat a hair follicle drug test, you can breathe easy knowing there is a product that can help you.
