

10 Ways to Make Any Building More Energy Efficient

Description

Property owners evaluate ways to cut down on their energy expenses. Simple tasks could help them save each month and decrease energy costs. One way many people cut down on heating costs is by installing new double-glazed windows from companies like <https://americanmadewindowssupstate.com/services/siding/>. In this article, we will be exploring 10 ways to help property owners save more.

1. Add Tinting to the Windows and Doors

Window and door tinting blocks ultraviolet sun rays and prevents heat transfer. It is available in a variety of styles that improve the aesthetics of the windows or doors. Tinting is a great option for residential and commercial property owners. It can act as a barrier between offices, or it can divide living spaces. By blocking natural light and preventing heat from getting in, the tinting improves energy efficiency dramatically. Property owners who want to add tinting to their windows or doors start by contacting [Smart Film AZ](#) now.

2. Seal Windows and Doors

By sealing the windows and doors, the property owner prevents drafts during the winter, and they block heat from coming in during summer. [Weatherstripping around the doors and windows](#) can improve energy efficiency and decrease power costs.

3. Seal Off Baseboards and Floor Boards

[Baseboards and floorboards can crack](#) and lead to air leaks, and if they aren't sealed properly, exterior air gets in. The property owner needs to seal them completely to keep the exterior air out.

4. Use a Tankless Water Heater

A tankless water heater doesn't fill up with water before heating that water. This decreases the amount of power and water the property owner uses. It heats the water as the property owner turns on the water in their sink or shower. This makes the home more energy efficient.

5. Keep Your HVAC Systems Cleaner

By cleaning the heating and cooling system each season, the property owner improves the performance of the system. This could prevent them from cycling too frequently and driving up energy costs. A cleaner system won't increase power costs and helps the homeowner control their heating and cooling costs.

6. Use LED Light Bulbs

A switch to LED light bulbs cuts down on the amount of power used when turning on the lights. The bulbs last far longer than incandescent bulbs and lower energy consumption.

7. Unplug Small Appliances and Electronics

By unplugging small appliances and electronics, the property owner eliminates phantom currents and their effects. If they aren't using a small appliance or their electronics unplugging them saves money on energy expenses.

8. Wash Your Clothes in Cold Water

Property owners wash their clothes in cold water on a shorter cycle to save money, too. The change could decrease their energy costs significantly.

9. Wait Till the Dishwasher Is Full Before Using

Property owners that wait until the dishwasher is full save money on water and power. If a property owner runs the dishwasher when it isn't full, they won't get the full benefit of the appliance. They also increase their costs unnecessarily.

10. Program Your Thermostat

A programmable thermostat allows the property owner to control the temperature in their home more efficiently. They can set it to run at a higher temperature during the summer when they aren't home. The property owner can decrease the heat during the winter. This cuts down on energy costs.

Property owners face higher than average energy costs if they don't follow strategies to control energy consumption. Even simple steps could save them a lot of money each month. By following tried and true strategies, property owners can save more and get more value from their electrical systems.
