

Naturepedic Ultra Breathable 2-Stage Organic Crib Mattress Review

Description

Comfort is an important feature to look for when shopping for a new mattress, but there are many other elements to consider, especially when itâ€™s a crib mattress for our babies. Whether theyâ€™re sleeping, reading, playing (this includes [jump-reading](#)), babies and toddlers spend 10-14 hours a day on their bed. This makes a mattress one of the most important objects in a childâ€™s environment as their brain and bodies constantly grow.

Conventional mattresses are made with chemicals and materials like vinyl/PVC, flame retardants, polyurethane foam, phthalates, perfluorinated compounds (PFCs), and formaldehyde. These things emit toxic gases called volatile organic compounds ([VOCs](#)) which are linked to causing short- and long-term adverse health effects. After learning about everything in conventional mattresses, it wasnâ€™t long before we [welcomed Naturepedic into our home](#).

Fast forward several months and our growing girl was ready to transition from her crib to a big kid bed. There was no question we wanted her sleeping on a [Naturepedic mattress](#) so she could enjoy a [#SafeHealthySleep](#) like Mommy and Daddy. Thankfully, I had the opportunity to [review one of their kids mattresses](#), the [2 in 1 Organic Cotton Ultra/Quilted Mattress](#).

After we found out we were having baby number two, there was no doubt that we wanted him sleeping on a Naturepedic organic crib mattress. In exchange for my honest review, Naturepedic kindly sent us their [Ultra Breathable 2-Stage Organic Crib Mattress](#).

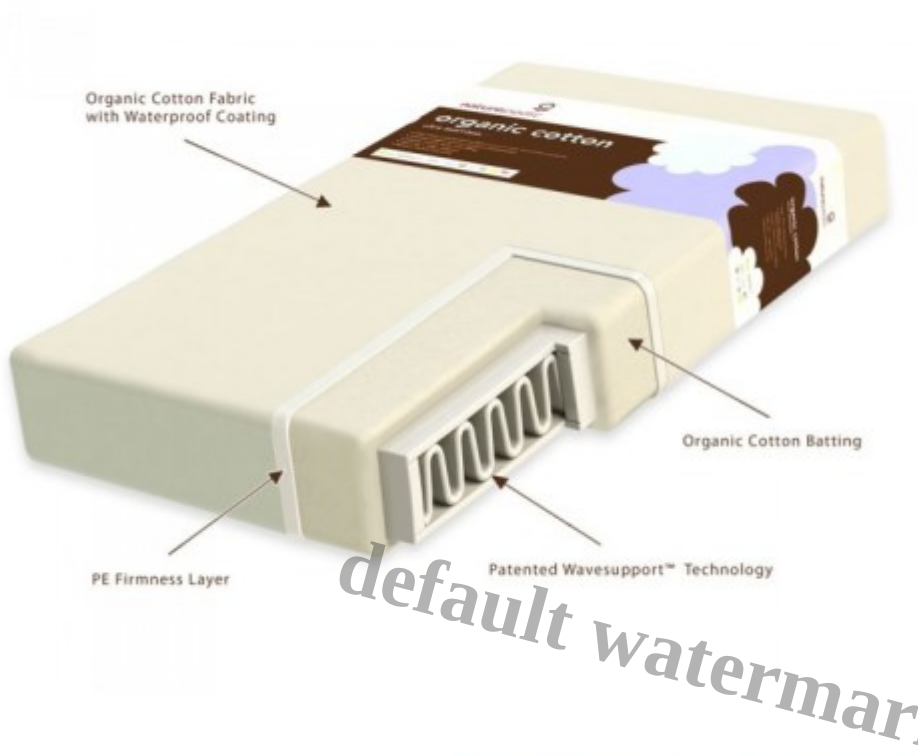

Since it arrived before Wes was born, big sis, being an experienced Naturepedic user (sleeper-on-er?), tested it out for her baby brother.

Just looking at the mattress, it's™s easy to see the care and attention put into each one. Made right here in the U.S.A by skilled Amish craftsmen, each mattress is built with pride and durability.

The mattress is firm, flat and seamless. The pad helps keep baby cool when they sleep.

corners, to ensure a snug crib fit.

The mattress is completely waterproof and comes with a built-in [dust mite/bed bug](#) barrier. When combined, the mattress and breathable pad provides a comfortable, luxurious sleep environment free of

flame retardants and other chemicals.

We all know our babies grow up too fast, but the Ultra Breathable 2-Stage Organic Crib Mattress will stay with them into the toddler years. One side is firmer for infants, and for toddlers the other side is a little less firm. As a “big girl”, Avery made sure to point out that her baby brother will need the Infant Side at first.

We were a bit nervous when the time came to get Wes to sleep on his Naturepedic mattress.

Will he be too hot?

Maybe heâ€™ll be too cold?

Would it be a good sleep?

Will he even sleep at all?!

Sleep aside, we knew we were laying him on a certified organic mattress that does not contaminate the nursery air with toxic chemicals like other mattresses made with polyurethane foam and/or vinyl.

So, how does he like it? Hereâ€™s a hintâ€¦!

It's hard to believe this dark-haired boy is the same, but that smile confirms it is.

From the start, our little boy has been enjoying a #safehealthysleep on his Naturepedic mattress. Going Mom and I both feel confident that heâ€™s getting quality sleep and is in a completely safe environment when sleepingâ€”or notâ€”
