

A Hairline Comparison: Scalp Micropigmentation vs. Hair Transplants

Description

“Sometime in the future, I think baldness will be a choice rather than something you have to suffer. Any bald person will have chosen to be bald.” Paul Kemp

According to global reports, there are more than 320 million people in the United States who have been suffering from hair loss problems. What’s more shocking is that 20% of the sufferers are below the age of 30. This shockingly surging number of people having hair loss is increasing and making it worse for people to bear it. Almost 1 in every 5 Americans is losing hair. Out of all, men are suffering from this problem the most.

The consequences of hair loss and other problems are

Be it dandruff or excessive hair loss, the consequence of all hair-related problems is baldness. This problem may be seen as an apparent impact leaving a major difference in one’s personality but when you wake up to the realities of this world, you tend to notice the amount of impact it leaves on your body. Hair loss often [leads to social phobia](#), depression, stress, and anxiety making the sufferer anti-social. The one suffering starts to feel low, finds it difficult to indulge in different fun activities.

Treatments for hair loss are

There are multiple types of treatment for excessive hair loss. The kind of effective hair loss treatment to be implemented on an individual depends on an array of factors. At times a regular therapy is enough and in some cases, even years of treatment don’t show progressive results.

In such circumstances, one needs to undergo treatments like hair transplant surgery or scalp micropigmentation. These are two widely popular treatment types trending in the market for hair loss issues.

Scalp micropigmentation is

It is a widely popular treatment for hair loss or complete baldness in people belonging to different age groups. The whole concept of [scalp micropigmentation](#) comprises crafting superficial injuries on the scalp to help the pigments extract on the desirable surface. It is one of the ancient treatments leaving an impeccable impact on the baldness of the sufferer in minimal time. The treatment involves fewer vibration strokes made with the help of a tool that comes with proper RPM.

Hair transplantation is

It can be referred to as a dermatological procedure that treats the bald area of the head with a surgical approach. A plastic [surgeon removes the hair strands](#) from the back of the head and implants them on the top of the head for the desired appearance and hair growth. The surgery is conducted after giving an anesthesia dose to the hair loss sufferer as the process is a bit painful.

The last word “

Hair loss is often known as alopecia where the individual experiences excessive hair loss on a temporary or permanent basis. This turns into complete baldness in some worse cases which makes recovery difficult and more challenging than usual. There can be multiple reasons behind it like “ medicinal conditions, hereditary, or hormonal imbalances in the body. No matter what is the reason one needs to undergo the right treatment to deal with such conditions before the scalp reaches the topless stage.
